THÈSE

En vue de l'obtention du

DOCTORAT DE L'UNIVERSITÉ DE TOULOUSE

Délivré par : *l'Institut National Polytechnique de Toulouse (INP Toulouse)*

Présentée et soutenue le *31/01/2023* par :
Igor **FONTANA DE NARDIN**

On-line scheduling for IT tasks and power source commitment in datacenters only operated with renewable energy

JURY

PREMIER MEMBRE	Professeur d'Université	Rapporteur
SECOND MEMBRE	Professeur d'Université	Rapporteur
TROISIÈME MEMBRE	Professeur d'Université	Examinateur
QUATRIÈME MEMBRE	Professeur d'Université	Examinateur
CINQUIÈME MEMBRE	Professeur d'Université	Examinateur

École doctorale et spécialité :
  MITT : Ecole Doctorale Mathématiques, Informatique et Télécommunications de Toulouse
Unité de Recherche :
  Laplace (UMR 5213) et IRIT (UMR 5505)
Directeur(s) de Thèse :
  Patricia STOLF et *Stéphane CAUX*
Rapporteurs :
  Premier RAPPORTEUR et *Second RAPPORTEUR*

Chapter 1

Introduction

1.1 Context

1.2 Motivation

1.3 Problem Statement

1.4 Research Goals

same thing, global research goals and not specific objectives for DZ2

1.5 Summary of Contributions

1.6 Publications and Communication

Submitted Peer Reviewed Conferences:

- I. F. de Nardin, P. Stolf and S. Caux, "Adding Battery Awareness in EASY Backfilling" 2023 IEEE 35th International Symposium on Computer Architecture and High Performance Computing (SBAC-PAD), Porto Alegre, Brazil, 2023.

Accepted Peer Reviewed Conferences:

- I. F. de Nardin, P. Stolf and S. Caux, "Analyzing Power Decisions in Data Center Powered by Renewable Sources", 2022 IEEE 34th International Symposium on Computer Architecture and High Performance Computing (SBAC-PAD), Bordeaux, France, 2022, pp. 305-314;

- I. F. de Nardin, P. Stolf and S. Caux, "Evaluation of Heuristics to Manage a Data Center Under Power Constraints", 2022 IEEE 13th International Green and Sustainable Computing Conference (IGSC), Pittsburgh, PA, USA, 2022, pp. 1-8;

- I. F. de Nardin, P. Stolf and S. Caux, "Mixing Offline and Online Electrical Decisions in Data Centers Powered by Renewable Sources", IECON 2022 – 48th Annual Conference of the IEEE Industrial Electronics Society, Brussels, Belgium, 2022, pp. 1-6;

- I. F. de Nardin, P. Stolf and S. Caux, "Smart Heuristics for Power Constraints in Data Centers Powered by Renewable Sources", Conférence francophone d'informatique en Parallélisme, Architecture et Système (COMPAS 2022), Jul 2022, Amiens, France. paper 7.

Others Disseminations:

- Talk: Analyzing Power Decisions in Data Center Powered by Renewable Sources, GreenDays@Lyon, March 2023.

1.7 Dissertation Outline

The remaining dissertation has the following organization:

Chapter 2 - Context and Related Work: This chapter presents the fundamentals to understand this dissertation. Considering the scope of the topic, the context consists of four parts. First, we introduce the context of global and ICT GHG emissions. Then, we describe renewable energy as an alternative to replace brown energy. After, we explain the usage of renewable to power a data center. Then, we define the uncertainties of weather and workload in a renewable-only data center. This last part also clarifies the importance of using predictions but with an online adaptation. After presenting the context, we introduce a list of works that solve part of our problem, highlighting the existing gaps in the state-of-the-art;

Chapter 3 - Modelling, Data, and Simulation: In this chapter, we describe the model to deal with the several elements that compose a renewable-only data center. Datazero2 creates a division between Offline and Online decisions. We present the model to deal with offline decisions using predicted power demand and production. Then, we demonstrate the output of Offline used by the Online. Finally, we define

the Online model, which englobes the job scheduling and modifications in the Offline plan. After describing the model, we explain the source of the different data (e.g., workload, weather, servers) applied in the simulations. We present an explanation of the work done in the traces of the literature. Finally, we present the simulation tools used in this work;

Chapter 4 - Introducing Power Compensations: This chapter describes the proposed optimization to react to power uncertainties. We created four heuristics to find the best place to compensate for battery changes, which aim to reduce the number of killed jobs and the distance between the battery level and the target level. The results presented are related to the publications [1] and [2];

Chapter 5 - Learning Power Compensations: This chapter presents the idea and the results of the introduction of Reinforcement Learning (RL) in the power compensation problem. We propose two RL algorithms (Q-Learning and Contextual Multi-Armed Bandit) to learn the best moment to compensate;

Chapter 6 - Adding Battery Awareness in EASY Backfilling: This chapter explains a heuristic to mix scheduling and power compensation decisions. This heuristic is based on the EASY Backfilling scheduling algorithm but considers the battery's State of Charge to make better decisions;

Chapter 7 - Conclusion and Perspectives: Finally, in this chapter, we summarize the contributions of this work, providing a discussion about future works.

Chapter 2

Context and Related Work

2.1 Global Warming and ICT Role

2.2 Renewable Energy

2.3 Renewable-only Data center

2.3.1 Electrical elements

2.3.2 IT elements

2.4 Sources of Uncertainty

2.4.1 Weather Uncertainties

2.4.2 Workload Uncertainties

2.4.3 Optimization Strategies for Dealing with Uncertainties

2.5 Literature Review

2.5.1 Discussion and Classification of the Literature

Chapter 3

Modelling, Data, and Simulation

3.1 Model

3.1.1 Offline Decision Modules

Power Decision Module

IT Decision Module

3.1.2 Offline Plan

3.1.3 Online Decision Modules

Job scheduling

Modifying Power Plan

Modifying IT Plan

3.2 Data

3.2.1 Workload Trace

3.2.2 Weather Trace

3.2.3 Platform Configuration

3.3 Simulation

3.3.1 Simulator

3.3.2 Metrics

3.3.3 Datazero2 Middleware

3.4 Conclusion

Chapter 4

Introducing Power Compensations

Chapter 5

Learning Power Compensations

5.1 Introduction

5.2 Algorithms

5.2.1 Random

5.2.2 Q-Learning approach

5.2.3 Contextual Multi-Armed Bandit approach

5.3 States

5.4 Actions

5.5 Rewards

5.6 Results Evaluation

5.7 Conclusion

Chapter 6

Adding Battery Awareness in EASY Backfilling

6.1   Introduction

6.2   Model

6.3   Heuristic

6.3.1   Predictions

6.3.2   Job Scheduling

6.3.3   Power compensation

6.4   Conclusion

Chapter 7

Conclusion and Perspectives

7.1 Conclusion

7.2 Perspectives
